

YURII STUS

Principal SDET | QA Automation Architect | Quality Engineering Lead

Lviv, Ukraine | Open to Relocate to London, UK

Email: stusyura@gmail.com

Eligible for UK Skilled Worker Visa Sponsorship

PROFESSIONAL SUMMARY

Principal Software Development Engineer in Test (SDET) and Quality Engineering Lead with 10+ years of experience delivering enterprise-scale Quality Engineering solutions across Fleet Management, Healthcare, Smart Home and Digital Platforms.

Proven track record of leading multiple automation initiatives, designing scalable UI and API automation frameworks, driving automation strategy and improving engineering quality across distributed Agile teams.

Experienced in leading Automation QA teams of up to 10 engineers, mentoring engineers, conducting technical interviews, collaborating with Architects, Engineering Managers and Product Owners, and enabling continuous delivery through modern Quality Engineering practices.

Strong expertise in Java, Selenium, Playwright, API Automation, CI/CD, AI-assisted engineering and automation architecture.

PROFESSIONAL EXPERIENCE

EPAM SYSTEMS (12.2017 – Present)

Principal SDET | Lead Automation QA Engineer (Penske, Amway, Mitsubishi Smart Home)

Lead enterprise Quality Engineering initiatives for large-scale digital platforms, driving automation strategy, framework architecture and engineering excellence across distributed Agile teams.

Responsibilities

- Defined automation strategy aligned with CI/CD, release governance and business objectives.

- Led multiple UI, API and Mobile automation initiatives across concurrent projects.
- Designed scalable automation frameworks using Selenium, Playwright and REST API.
- Managed and mentored Automation QA teams of 4–10 engineers.
- Collaborated with Architects, Engineering Managers, Product Owners, Developers and DevOps teams.
- Established automation standards, reusable framework components and best practices.
- Estimated delivery effort and reported quality metrics to stakeholders.
- Modernised legacy automation frameworks to improve scalability and maintainability.

Achievements

- Reduced manual regression effort by approximately 70% through strategic automation of regression scenarios and CI/CD optimisation.
- Led multiple enterprise automation initiatives across UI, API and Mobile platforms.
- Managed and mentored Automation QA teams of up to 10 engineers.
- Maintained UI automation suites with 90%+ nightly execution stability.
- Increased API automation coverage to 95–100% for critical business services.
- Designed reusable automation frameworks adopted across multiple teams.
- Introduced AI-assisted engineering practices using GitHub Copilot/Claude code and MCP.
- Improved collaboration between QA, Development, DevOps and Product teams, increasing release confidence.

Environment

Java • TypeScript • Selenium • Playwright • Karate DSL • REST Assured • BrowserStack • Maven • TestNG • JUnit 5 • SQL • Git • Jenkins • GitHub Copilot • MCP • Jira

LOHIKA (03.2015 – 12.2017)

Senior Automation QA Engineer (Thomson Reuters – Clar TCM)

Designed and delivered enterprise automation solutions while improving Quality Engineering practices for Agile software development programmes.

Responsibilities

- Built a scalable UI automation framework from scratch.
- Implemented Jenkins CI pipelines for automated smoke and regression testing.
- Automated business-critical user stories and acceptance criteria.
- Expanded automation architecture to support multiple product streams.
- Mentored new automation engineers and contributed to planning and estimation.
- Performed backend validation and maintained framework quality.

Achievements

- Built reusable automation framework adopted across multiple project streams.
- Implemented CI pipelines enabling continuous regression execution.
- Improved framework scalability through architectural refactoring.
- Expanded automation coverage, significantly reducing manual testing effort.

Environment

Java • Selenium WebDriver • Maven • Jenkins • HTTP Client • TestNG • SQL • Git • Jira

SOFTSERVE (03.2014 – 02.2015)

Automation QA Engineer (Healthcare Web Services Platform)

Delivered automation solutions for enterprise healthcare applications supporting continuous integration and release quality.

Responsibilities

- Automated UI and service-level testing.
- Developed automated regression suites integrated with Jenkins.
- Performed API validation, backend verification and cross-browser testing.
- Improved framework stability through refactoring.
- Collaborated with developers, business analysts and QA engineers.

Achievements

- Expanded regression automation coverage.

- Improved framework maintainability and readability.
- Supported continuous integration through automated smoke and regression execution.

Environment

Java • Selenium WebDriver • TestNG • SoapUI • Jenkins • Maven • SQL • Git • Jira

OSTWARE SERVICES aka TOROKI UA (02.2013 – 01.2014)

QA Automation Engineer (Cisco like smart router apps)

Supported manual and automated testing across enterprise web and network-based applications.

Responsibilities

- Developed automated UI tests using Python, Selenium and pytest.
- Performed manual functional, GUI and exploratory testing.
- Analysed requirements with stakeholders.
- Maintained automation scripts and testing documentation.
- Produced quality metrics and testing reports.

Achievements

- Introduced Python-based automated tests reducing repetitive manual testing.
- Improved defect detection through automation of critical workflows.
- Successfully supported Scrum and Waterfall projects.

Environment

Python • Selenium WebDriver • pytest • Linux • Git • Jira

EDUCATION

Ivan Franko National University of Lviv

Master of Science in Biophysics
